FM 186-2 CLEAN & SAFE SPILL CLEAN UP KIT ST1010-B

Safer
Best Management Practice
Environmentally Correct

ST 1010-B
\$301.95
(Plus Freight)

- ◆ Apply the FM 186-2 chemical on the spill, mix with the brush, wipe up and handle as a nonhazardous solid waste*. Cost effective – significantly less expensive and safer than kitty litter and the hazardous waste drum method.
- ◆ The FM 186-2 Spill Clean Up Kit (ST 1010-B) includes everything you need to meet regulatory requirements for both large and small spill clean up. Complete onsite use and training guide with your choice of CD-ROM, DVD or VHS format. Our regular service calls insure that you never get caught without enough chemical or supplies.

*Petroleum waste is a presumptive hazardous waste and the users/generators are responsible for proper waste characterization and disposal. Federal and state regulations require generators to determine their waste classification(s). Regulations also allow for prior knowledge of the waste and treatment procedures in determining the waste's classification. The FM 186 program is a treatment procedure that can be applied as part of the prior knowledge package. Nothing herein is to be taken as approvals that all spill materials would be rendered non-hazardous. Ultimately it is up to the generator to determine the resulting clean up material and to dispose of it correctly.
